Лабораторная работа № 3

по дисциплине: Теория информации

тема: «Исследование возможности применения методов энтропийного
кодирования для обработки двоичных последовательностей»

Вариант № 12

Выполнил: ст. группы ПВ-211

Павленко Станислав Вячеславович

Проверили:

Твердохлеб Виталий Викторович

Белгород 2023 г.

Содержание отчета

1. Аналитика касательно построения кодов для исходной двоичной последовательности
2. Примеры кодовой реализации п.3, п.3, п.4 и п.6.
3. Результаты обработки кодов, полученных в п.5.
4. Текстовая последовательность, восстановленная к читаемому виду.
5. Общие выводы

Ход работы:

1. Открыть файл Лабораторная работа 3 (задание).txt. Рассмотреть возможность построения кода по методам Хаффмана и Шеннона-Фано для бинарной последовательности. Сделать выводы.
2. Рассмотреть варианты обработки цепочек символов, а именно:
 - 2 символа;
 - 4 символа;
 - 8 символов.

Для этого разработать консольное приложение, разбивающее сплошной массив символов на цепочки заданной длины.

Код модуля:

```
std::vector<simb> breakToParts(std::vector<char> &message, int size) {  
    std::vector<simb> res;  
    for (int i = 0; i < message.size(); i += size) {  
        std::string latter;  
  
        for (int j = 0; j < size; ++j)  
            latter.push_back(message[j + i]);  
        res.push_back(simb(latter));  
    }  
  
    return res;  
}
```

3. Рассматривая каждую цепочку (2, 4 и 8 символов длиной) как отдельный символ, построить коды по методу Хаффмана и Шеннона-Фано.

```

5. По результатам работы в п.3 сделать выводы по поводу полученных результатов для каждого из методов (простота, скорость, полученные результаты (рассчитать коэффициенты сжатия)).

	N = 2	N = 4	N = 8
Хаффмана	1	1.32	2.04
Шеннона-Фано	1	1.23	2.03

6. Написать программу, восстанавливающую последовательности, полученные в п.3 в исходный вид согласно вариантам, приведенным в п.2.

Модуль для декодирования:

```
std::vector<simb> createAlp() {
    std::cout << "input size of alp: ";
    int size;
    std::cin >> size;

    std::vector<simb> alp;

    for (int i = 0; i < size; ++i) {
        simb sb;
        std::string s;
        std::cin >> s;

        int j = 0;
        std::string liter;
        while (s[j] != '-') {
            liter.push_back(s[j]);
            j++;
        }
        sb.liter = liter;
        j++;
        liter = "";
        while (s[j] != '-') {
            liter.push_back(s[j]);
            j++;
        }
        sb.code = liter;
        j++;
        int n = 0;
        while (j < s.size()) {
            n += s[j] - '0';
            j++;
        }
        sb.ratio = n;

        alp.push_back(sb);
    }

    return alp;
}

void decodeMessage(std::string &message, std::vector<simb> &alp) {
    int iStart = 0;
    int iEnd = 0;

    std::string liter;
    while (iStart < message.size() - 1) {
        liter.push_back(message[iEnd]);
```

```
int i = -1;
bool isFound = false;
while (i != alp.size() - 1 && !isFound) {
    i++;
    if (liter == alp[i].code)
        isFound = true;
}

iEnd++;

if (isFound) {
    std::cout << alp[i].liter;
    liter = "";
    iStart = iEnd;
}
}
```

Ввод программы:

```

Исходный текст:

Ветер свистел, визжал, кряхтел и гудел на разные лады. То жалобным тоненьким голоском, то грубым басовым раскатом распевал он свою боевую песенку. Фонари чуть заметно мигали сквозь огромные белые хлопья снега, обильно сыпавшиеся на тротуары, на улицу, на экипажи, лошадей и прохожих.
